2. Selection and Analysis of Website

2.1 Justification

Our group selected the Pacific Northwest X-Ray Inc. website for this redesign project. We selected this website because there are so many things to redesign. However, the current interface is outdated, confusing, and very difficult to use on mobile phones. Redesigning this interface will improve usability of the website and help us to improve our knowledge and redesigning skills as undergraduates.

2.2 Overall Usability Issues

We identified the following usability weaknesses in the original pnwx.com website:

- **Outdated Visual Design:** The site does not look modern and there are some inconsistencies in the font color space used making it difficult to easily identify the information on the site.
- **Confusing navigation:** Because there are a large number of categories and subcategories in the navigation menu of the website, it is difficult for users to quickly find the products or information they need. In some cases, links have to be clicked several times to go to the required pages.
- **Poor Product Organization:** Because the information on the product pages is very long lines, the important information cannot be separated clearly. The image descriptions and specifications of the products are not well organized, so in some cases even the brands have to be compared.
- **Lack of Mobile Responsiveness:** The website is not fully responsive to mobile phones and tablets, the content does not fit properly on small screens, the font is small and the screen has to be scrolled more.

Overall Usability Issues:

Confusing navigation

Outdated Visual Design

Poor Product Organization

Lack of Mobile Responsiveness

3. Global UI/UX Design System

Our group agreed on a shared set of design rules to ensure consistency across all 10 pages.

3.1 Typography Style Guide

We selected the font family **Inter** because it is modern, clean, and highly readable on digital screens.

UI Element	Font Weight	Font Size	Usage
Heading 1 (H1)	Bold	32px	Main page titles
Heading 2 (H2)	Semi-Bold	24px	Section headings
Heading 3 (H3)	Medium	20px	Product titles
Body Text	Regular	16px	Paragraphs and descriptions
Small Text	Regular	14px	Button, caption and Labels

3.2 Color Theory (60-30-10 Rule & Color Psychology)

Our redesign follows the 60-30-10 color rule to create a balanced and professional interface.

- **Primary Color(60%)-Off White(F8FAFC)**

Used for page background and content areas to create a clean and spacious layout. It's makes content easier to read. Gives the interface a professional appearance.

- **Secondary Color(30%)-DarkNavy Blue(#003366)**

Used for the navigation bar, headers, footers, secondary buttons,and section titles. Dark navy blue represents trust, professionalism and reliability. It helps build customer confidence and create a professional brand image.

- **Accent Color(10%)-Orange(003366)**

Used only for primary Call-To-Action(CTA) buttons,such as Search, Login, Create Account, Verify. Orange attracts user's attention. Orange color buttons important to identify the keys and balanced and visually appealing interface.

3.3 Ben Shneiderman's 8 Golden Rules

1. **Strive for Consistency:** We used identical button shapes, card layouts, and navigation sidebars across all pages redesigned by all 5 members.
2. **Enable Frequent Users to Use Shortcuts:** The redesigned website provide a clear navigation bar and product categories allow returning users to quickly locate X-ray Equipment without browsing through multiple pages.
3. **Offer Informative Feedback:** The system provides immediate feedback after user actions. For Example when a download the certificate, a confirmation message is displayed to inform the user that the action was completed successfully.

4. **Design Dialog s to Yield Closure:** Each user task end with a clear confirmation. For example, after completing the submitting the registration form, users receive a success message confirming that the process has been completed.
5. **Prevent Errors:** Required fields in forms are clearly marked, and input validation messages help users correct before submitting forms. This reduces errors during registration.
6. **Permit easy reversal Of actions:** User can easily remove products from the shopping cart and update product quantities before proceeding to checkout. This allow them to correct mistakes and change their decisions without restarting the shopping cart.
7. **Support Internet Locus of Control:** Users have full control over their browsing experience. They can search for products, filters categories, add or remove items from the cart, and manage their shopping process without unnecessary system interruptions.
8. **Reduce Short-Team Memory Load:** the redesigned website keeps the navigation bar and search function visible across all pages. This allows users to access important features without remembering previous steps or pages locations, making navigation easier and more efficient.

4. Individual Contributions

Individual Research, Page Redesigns & CRUD Operations

4.1 Member1:A.M.H.D.Pathmasiri (KEG/IT/2025/F/0019)

A. Assigned Pages:

- Registration Page
- Certifications & Compliance Page

B. User Persona:

Ann Wijewardhana

Age: 30

Occupation: Procurement Officer
Health Care Lanka Ltd.

Background:

Ann is responsible for sourcing high-quality medical equipment for her hospital. Her main goal is to find reliable, trusted suppliers who meet strict safety standards. She is very busy and need a fast, professional process to get her job done.

Goals:

She needs to quickly confirm that a supplier is compliant with certifications and safety standards before she can authorize any purchase. She wants to issue purchase orders without calling the supplier or filling out long forms. She needs clear, easily accessible documentation to prove to her hospital's board that the equipment is safe to use.

Technical Expertise:

Can use Excel,Hospital Procurement portals. knows B2B platforms, but not a developer. Needs Clear labels

Frustrations:

"the registration process is too long! I don't have time to re enter the details every time.
There is no way to save the profile or track the quotes
If I can't easily find certification documents,I can't approve the Purchase

Usage Behavior:

mostly use mobile device and use desktop when required

C. Think-Aloud Protocol Evaluation Table:

Redesigned Page Name	Task Given to User	User Actions & Thoughts (Think-Aloud)	Observed Usability Issues	Proposed UX Solution
Registration Page	Create a new account by completing the registration form and submitting the required information.	User said, <i>"What's Tax ID? No example given, I'm confused."</i> Later, <i>"Why type the address twice?"</i> After submitting, <i>"Did it save? No confirmation message."</i>	No Tax ID guidance, duplicate address entry, and no success confirmation.	Add Tax ID placeholder text, a "Same as Shipping Address" checkbox, and a success confirmation message.
Certifications & Compliance Page	Find FDA-certified products and download multiple certificates for an audit.	The user said, <i>"I need FDA certificates only. Do I have to scroll through all the products?"</i> Later, the user commented, <i>"For an audit I need 15 certificates. Download one by one? No way."</i>	Users cannot quickly locate specific certifications because there is no filtering option. Additionally, certificates can only be downloaded individually, making the process slow and inefficient.	Add certification filters (e.g., FDA, CE, ISO) to help users quickly find the required certificates. Include a button to allow users to download multiple certificates in a single action.

D. Low-Fidelity Sketches & Comparison Evaluation:

Registration Page :

2 Low Fidelity Sketches	Selected	Justification
Variant A Variant B	Variant B	Variant B is the better design option because it uses a step-by-step structure that is more organized and user-friendly. It is easier to complete, provides clear sections for navigation, and makes error checking simpler. The shorter-looking layout reduces complexity, especially on mobile devices, resulting in a more professional and efficient user experience.

Certifications and compliance page :

2 Low Fidelity Sketches	Selected	Justification
Variant A Variant B	Variant A	Variant A is the better design because it provides more detailed information and a complete view of compliance records. It includes audit reports, internal audit details, and a help section to support users. With more features and a detailed, informative layout, Variant A offers a more comprehensive and effective user experience. Therefore, Variant A is the preferred design.

E. High-Fidelity & CRUD Screens :

I developed the final high-fidelity screens in Fig ma using the shared design system.

CRUD Implementation:

- ✧ **Create Operation(Registration Page):** Users can create a new account by entering their personal information such as name, email, address, and password. After submitting the registration form, the new user account is successfully created.
- ✧ **Read Operation(certifications & Compliance Page):** Users can view the certifications and compliance information, helping them that the medical equipment meets industry standards and quality requirements.

● *interactive CRUD states:*

F. 8 golden rules and heuristics in to your selected page :

● Registration Page -

The redesigned **Registration Page** applies **Ben Shneiderman's 8 Golden Rules** by maintaining a consistent layout, colors, typography, and button styles throughout the registration process (**Strive for Consistency**). Clear labels, placeholder text, and field validation help prevent user errors (**Prevent Errors**). A progress indicator informs users of their current step (**Offer Informative Feedback**). Users receive a confirmation message after successful registration, giving a clear sense of completion (**Design Dialog s to Yield Closure**). The "Same as Shipping Address" option reduces repetitive input and supports efficient interaction (**Enable Frequent Users to Use Shortcuts**). Users can easily edit their entered information before submission (**Permit Easy Reversal of Actions**), while the well-organized form reduces memory load and makes the process easier to complete (**Reduce Short-Term Memory Load**).

● Certifications and Compliance Page -

The redesigned **Certifications & Compliance Page** also follows **Ben Shneiderman's 8 Golden Rules**. A consistent colour palette, navigation, and button styles are used throughout the page (**Strive for Consistency**). Search and filter options enable users to quickly locate the required certifications (**Enable Frequent Users to Use Shortcuts**). Download buttons provide immediate feedback when users interact with certification documents (**Offer Informative Feedback**). The clear page structure and organized certification cards help users easily recognize information (**Reduce Short-Term Memory Load**). Users can refine their search or change filters at any time (**Permit Easy Reversal of Actions**) while remaining in control of their navigation and interactions (**Support Internal Locus of Control**).

Certifications and Compliance Page :

<https://www.figma.com/design/N5rv8D4ElkB8nsiZVA5mIR/UI-Assignment---Pacific-Northwest?node-id=116-207&t=306iHRKvZ8VsxMHj-4>

4.2 O.R.S.C. Jayasekara (KEG/IT/2025/F/0021)

A . Assigned Pages:

- About Us page
- Search Result Page

B. User Persona:

Dr.Sarah Johnson

Age: 42

Occupation: Radiologist,
Colombo General Hospital

Background Dr. Sarah Johnson is an experienced radiologist responsible for evaluating and selecting medical imaging equipment for hospital use. She regularly researches X-Ray systems online and relies on detailed technical specifications to make informed purchasing decisions.	Frustrations Cannot filter products qualities. Search results lack advanced technical filtering options. Difficult to assess company credibility and expertise. Limited information about radiology experience and certifications.	Technical Expertise High technical knowledge in radiology equipment. Comfortable using advanced web applications. Primarily uses a desktop computer for research. Familiar with technical terms, specifications, and product comparisons
Goals Find X-Ray equipment matching required kVp and mA specifications. Compare image quality and phantom type options. Select the most suitable equipment efficiently. Purchase from a trusted and experienced supplier.	User Behavior Frequently searches for medical imaging equipment online. Compares multiple products before making decisions. Reads technical specifications carefully. Uses search filters to narrow down options.	

C. Think-Aloud Protocol Evaluation Table:

Redesigned Page Name	Task Given to User	User Actions & Thoughts (Think-Aloud)	Observed Usability Issues	Proposed UX Solution
About Us Page	Find information about the company equipment conditions and pricing details.	There is no specific page to get information about this company. Some necessary points are mentioned between the pages. Unable to find required number of facts.	Poor visual Hierarchy Excessive Text Content Limited Visual Elements Weak call to Action Poor color Combination Difficult to find the information	Improve content hierarchy using clear headings and sections, reduce long text blocks, add icons and images, and provide quick navigation links to important information.
Search Result Page	Check What devices they have searched so far	Since there is no page like Search result, there is no place to display the searched items in one page. If you want to those items again, you must search again.	Poor Information Organization Poor Color Combination Cannot Find the page	Introduce a card-based results layout, add advanced filters and sorting options, improve spacing between results, and highlight important product information.

D. Low-Fidelity Sketches & Comparison Evaluation:

About Us Page -

2 Low Fidelity Sketches	Selected	Justification
Variant A 	Variant B 	Variant A was selected for the About Us page because it provides easy navigation, better readability, and a user-friendly interface. It also has a more attractive visual design, making the page easier to understand and more engaging for users. Therefore, Variant A offers the best overall experience for the About Us page

Search List Page -

2 Low Fidelity Sketches	Selected	Justification
Variant A 	Variant B 	Variant B was selected for the Search Result page because it improves product visibility and makes filtering easier for users. It also increases user efficiency with a simple and well-organized layout, helping users find products quickly. Therefore, Variant B provides a better search experience and is the preferred design.

E. High-Fidelity & CRUD Screen :

I developed the final high-fidelity screens in Fig ma using the shared design system.

CRUD Implementation:

- ✧ **Read Operation (About Us Page):**The About Us page supports the Read operation by allowing users to view important company information, including the company's background, mission, vision And team.
- ✧ **Read & Update Operations(Search List Page):** Users can browse medical devices displayed as organized product cards with images, product names and prices. User can enter or modify search keywords to refine the display search results. The product list is updated according to the keyword entered, allowing users to quickly find related products.

● *interactive CRUD states:*

F. 8 golden rules and heuristics in to Search List page & About Us Page :

* Using the same color scheme, fonts, navigation bar and button styles on both pages maintains consistency within the website. The search facility is included in the search list page and after the user searches, a clear response is given by pointing to the relevant product.

(Strive for consistency,

Enable Frequent Users to Use Shortcuts,

Offer Informative Feedback,

Design Dialog s to Yield Closure,

Permit Easy Reversal of Actions & Support Internal Locus of Control)

* The about us page presents information about the company in clear headings and well-organized sections, so it is easy to read and the user's confusion is reduced. Also, by using the same navigation bar and layout in all fields, the user can easily find the necessary information without having to remember pages.

(Prevent Errors,

Reduce Short-Term Memory Load)

Figma Prototype Link (Notice Page):

About Us Page :

<https://www.figma.com/design/N5rv8D4ElkB8nsiZVA5mIR/UI-Assignment---Pacific-Northwest?node-id=15-6&t=306iHRKvZ8VsxMHj-4>

Search List Page :

<https://www.figma.com/design/N5rv8D4ElkB8nsiZVA5mIR/UI-Assignment---Pacific-Northwest?node-id=34-208&t=306iHRKvZ8VsxMHj-4>

4.3 G.C.M.L.Perera (KEG/IT/2025/F/0081)

A . Assigned Pages:

- Login Page
- Product Page

B. User Persona:

persona

GOALS

- Find maintenance parts, accessories, spare parts.
- Add product to a quote request.
- Change product quantities and place orders.

PAIN POINT

- *Unable to save or easily access quote history after logging in.
- *Product pages do not clearly provide part numbers or specification sheet download links.

TECH LEVEL

- David Wilson is highly skilled in using computers and online systems. he regularly uses website to search for medical equipment , manage quotations, and place orders. He prefers efficient, easy-to-use interfaces that provide quick access to product information and support his daily work.

QUOTE

" I log in to track parts. If my cart disappears, I'm done"

DAVID WILSON

Age - 45

Job Title - Biomedical engineer

Company- Kandy Madical Center

Location - Kandy, Sri Lanka

Experience - 20+ years

Education - B.Sc. in Biomedical Engineering

David is a Biomedical Engineer with over 20 years of experience maintaining medical imaging equipment. he is responsible for sourcing maintenance parts, accessories, and spare parts to ensure smooth operation of machines in the hospital.

HOW PAGES HELP

LOGIN PAGE

Login= Saved quotes, order history CRUD.

Quick access to past quotes and orders.

Keeps cart and quote safe.

Save time and improves trust.

PRODUCT PAGE

Add to Quote create.

Qty update easily.

Part number & spec sheet download link

Helps in correct part selection and ordering.

C. Think-Aloud Protocol Evaluation Table:

Reducing Page Name	Task Given to User	User Actions & Thoughts	Observed Usability Issues	Proposed UK Solution
Login Page	Log in to the website and access saved quotations	User searched for the login form. User also looked for account benefits before signing in.	Forgot password link is not noticeable. Benefits of create an account are unclear.	Make the forgot password link more visible and add a short section explaining account benefits.
Product Page	Find a spare part and add in to a quotation request.	User viewed the product details. User spent time searching for the download link.	Part number and Specification sheet link are difficult controls are not prominent.	Display the part number near the product title, add a clearly visible Download Specification button, and highlight quantity controls.

D. Low-Fidelity Sketches & Comparison Evaluation:

Login Page -

2 Low Fidelity Sketches	Selected	Justification
Variant A  Variant B 	Variant A	Variant A was selected for the Login page because it provides easy navigation, better readability, and a user-friendly interface. It also has a visually appealing design that helps users log in quickly and comfortably. Therefore, Variant A offers a better overall login experience.

Product Page -

2 Low Fidelity Sketches	Selected	Justification
Variant A  Variant B 	Variant A	Variant B was selected for the Product page because it improves product visibility and makes filtering easier for users. Its simple layout increases user efficiency and helps users find products more quickly. Therefore, Variant B provides a more effective and user-friendly product browsing experience.

E. High-Fidelity & CRUD Screens :

I developed the final high-fidelity screens in Fig ma using the shared design system.

CRUD Implementation:

- ✧ **Create Operation (Login Page):**Users can create a new account by entering personal information such as email address and password. After submitting the registration form, the user account is successfully created and saved in the system.
- ✧ **Read Operation (Product Page):**Users can view medical products, including product images, prices, part numbers, specifications, and availability details. This helps users compare products and access important technical information before requesting a quotation.
- ✧ **Update Operation (Product Page):**Users can update the quantity of selected products before adding them to the quotation list. This allows users to manage product quantities according to their requirements.
- ✧ **Delete Operation (Login / Product Page):**Users can remove products from their quotation cart or clear saved quotation items if they are no longer needed.

● *interactive CRUD states:*

F.8 golden rules and heuristics in to Login Page & Product page :

- 1. Strive for Consistency:** The Login Page and Product Page use consistent colors, typography, buttons, and navigation layouts throughout the interface.
- 2. Enable Frequent Users to Use Shortcuts:** Search bars, quick navigation menus, and visible quotation buttons help experienced users complete tasks quickly.
- 3. Offer Informative Feedback:** The system provides feedback messages such as successful login notifications and quotation confirmation messages.
- 4. Design Dialog s to Yield Closure:** After completing actions like login or adding a product to a quote, users receive confirmation that the task was successfully completed.
- 5. Prevent Errors:** Input validation is used in login and registration forms to reduce incorrect user entries.
- 6. Permit Easy Reversal of Actions:** Users can remove products from quotations or update product quantities easily.
- 7. Support Internal Locus of Control:** Users have full control over product selection, quotation management, and account actions.
- 8. Reduce Short-Term Memory Load:** Important information such as part numbers, specifications, and quotation options are clearly displayed to minimize user memory effort.

Product Page :

<https://www.figma.com/design/N5rv8D4ElkB8nsiZVA5mIR/UI-Assignment---Pacific-Northwest?node-id=130-143&t=306iHRKvZ8VsxMHj-4>

4.4 Member 4: G.G.H.D.Jayarathna (KEG/IT/2025/F/0059)

A . Assigned Pages:

- Home Page
- Shopping Cart / Quote Page

B. User Persona:

Ms Lisa Anderson

Age: 30 Years Old
Occupation: Procurement Officer
Company: HealthCare Lanka

Background & Bio Lisa works at a large private hospital and handles daily bulk purchasing. She uses websites to compare equipment prices and procure official orders.	Frustrations 1.Current PNWX site has too much text and clutter 2.No success messages when changing cart items 3.Managing the cart list is very confusing.	Technical Expertise: 1.Laptop & PC skills: High 2.Smartphone skills: High 3.Prefers simple web design with clear buttons
Goals 1. Quick product search and fast "Add to Cart". 2.Easy changing of item quantities inside the cart 3.Fast submission to get a price quote via email.	Behaviour 1.Uses office desktop PCs daily. 2.Wants big search bars and clear buttons. 3.Expects popup feedback for system changes.	

"I need a clean website to manage my cart and get a quote easily without reading long text."

C. Think-Aloud Protocol Evaluation Table:

Task	User Actions & Observations	Usability Issue Identified	Severity
Task 1: Search Items	User looked for a search bar on the homepage but could not find one.	No search bar available on the main page.	High
Task 2: Manage Cart	User added an item but did not see any success message or popup feedback.	No system feedback and it is difficult to change quantities.	Critical
Task 3: Get Quote	User struggled to find the submit button because of too many text paragraphs.	High visual clutter makes main buttons difficult to find.	Medium

D. Low-Fidelity Sketches & Comparison Evaluation:

Home Page-

2 Low Fidelity Sketches		Selected	Justification
Variant A 	Variant B 	Variant B	Variant B was selected for the Home page because it provides better product visibility and makes quantity control easier for users. It has a user-friendly interface with a simple and well-organized layout, allowing users to browse products more efficiently. Therefore, Variant B offers a better overall experience for the Home page.

Shopping Cart / Quote Page -

2 Low Fidelity Sketches		Selected	Justification
Variant A 	Variant B 	Variant B	Variant B was selected for the Shopping Cart / Quote page because it improves product visibility and allows easy quantity control. Its simple and user-friendly layout helps users review and manage their cart or quotation more efficiently. Therefore, Variant B provides a smoother and more convenient shopping experience.

E. High-Fidelity & CRUD Screens :

I developed the final high-fidelity screens in Fig ma using the shared design system.

CRUD Implementation:

✧ **Home Page:**

Read Operation (Product & Service Showcase): Users can view and browse the categories of medical equipment and available appointment slots with their specifications and pricing, allowing them to easily explore available options before adding items to the cart.

Create Operation (Add to Cart / Book Appointment): Users can click the "Add to Cart" or "Book" button on any specific medical equipment or service slot. This action creates a new entry in their active shopping session, updating the shopping cart icon in the top right corner.

✧ **Shopping Cart / Quote Page :**

Read Operation (Cart Summary View): Users can view and review their selected items in a detailed list containing images, item names, quantities, individual prices, and the calculated Order Summary (Subtotal, Shipping, and Totals).

Update Operation (Modify Quantity): Users can update the quantity of each medical item using the plus (+) and minus (-) buttons, or remove an item entirely by clicking the delete (X) icon, which automatically recalculates the total order summary prices.

- **interactive CRUD states:**

F. 8 golden rules and heuristics in to Home Page & Cart page :

Home Page:

Consistency (Golden Rule 1 / Heuristic 4): The layout uses the same top navigation bar, clinic logo, and search bar like all other pages in the website system, so users don't get confused. Button styles for "Add to Cart" or "Book" follow a uniform design language across the entire platform.

Flexibility and Efficiency of Use (Golden Rule 7 / Heuristic 7): Users can easily browse expensive medical equipment by categories or use the prominent search bar to find specific items or dentist slots quickly, making the navigation efficient for both new and regular users.

Cart Page:

User Control and Freedom (Golden Rule 3 / Heuristic 3): If a user accidentally adds an incorrect item or selects a wrong quantity, they can easily undo their action by modifying it using the plus (+) and minus (-) buttons or completely remove the item using the delete (X) icon without any hassle.

Visibility of System Status (Heuristic 1): The order summary subtotal, tax, and final totals update instantly on the screen whenever a medical item's quantity is changed or deleted, keeping the user fully informed of the current state of their shopping cart.

Cart Page :

<https://www.figma.com/design/N5rv8D4ElkB8nsiZVA5mIR/UI-Assignment---Pacific-Northwest?node-id=138-234&t=306iHRKvZ8VsxMHj-4>

4.5 Member 5:G.R.H.U.Gamlath (KEG/IT/2025/F/0068)

A . Assigned Pages:

- Testimonials / Case Studies Page
- Contact Us Page

B. User Persona:

Emily Davis

- Name: Emily Davis
- Age: 35
- Occupation: Clinic Owner, Galle Dental Care

Background

Emily leads Galle Dental Care and wants to upgrade to a reliable yet affordable X-ray. It's a major purchase, so she needs proof. She wants to see actual stories and photos of other successful clinic setups using the equipment before spending the money

Goals

To locate a budget-friendly X-ray machine suitable for a small practice.
To read verified reviews and case studies from other clinics to trust product reliability.
To find a direct contact form on the website to request an official price quote.

Frustrations

Most testimonials on medical websites look fake or generic because they lack real clinic names.

Submitting a contact form feels useless because administrators take days to reply.

Lack of transparency regarding user re

User Behavior

Mostly browses sites on her phone during busy clinic gaps.
Saves and compares clinic feedback before spending money.
Expects a quick automated alert or status update right after sending an inquiry.

Technical Expertise

Medium: Uses smartphones and dental management apps daily, but gets blocked by legacy web systems.

C. Think-Aloud Protocol Evaluation Table

Redesign ed Page Name	Task Given to User	User Actions & Thoughts	Observed Usability Issues	Proposed UX Solution
Testimoni als Page	Search for reviews or user feedback	User tried using the search box but it failed. Said:"the system is broken, I cannot find any reviews to trust them	No testimonials or reviews available on the site.	Create a clean grid layout to show real buyer profiles and clinic ratings.
Contact Us Page	Try to find the contact form to ask for a price quote	User went to terms page and clicked the email. Said:"there is so direct form, it just open my desktop email app instead	No web input form, forces users to open external apps	Implement a proper online contact form with a success message.

D. Low-Fidelity Sketches & Comparison Evaluation:

✧ Low-Fidelity Sketches

Testimonials / Case Studies Page -

Contact Us Page -

E. High-Fidelity & CRUD Screens :

I developed the final high-fidelity screens in Fig ma using the shared design system.

CRUD Implementation:

- ✧ **Read Operation(Testimonials Page):** Users can view and read the customer testimonials and dentist reviews with clinic names, helping them to trust the website before buying expensive medical equipment.
- ✧ **Create Operation(Contact Us Page):** Users can request a pricing quote by entering their information such as name, email, and message. After clicking submit button, a success message popup on screen to confirm it sent.

● *interactive CRUD states:*

F. 8 golden rules and heuristics in to Home Page & Cart page:

1. Testimonials & Case Studies Page-

Consistency (Golden Rule 1 / Heuristic 4): The layout uses the same top navigation bar, logo, and search case studies bar like all other pages in the website system, so users don't get confused.

Visibility of System Status (Heuristic 1): The "TESTIMONIALS" link in the main navigation menu highlights clearly when the user is on this page, showing exactly where they are.

Recognition Rather than Recall (Heuristic 6): Real doctor profiles, clinic names, and star ratings are displayed in clean grid cards so medical professionals can easily see and trust the reviews without searching or remembering past details.

2. Contact Us Page-

Offer Informative Feedback (Golden Rule 3 / Heuristic 1): When the user enters details and clicks the "Send Message" button, a blue success toast notification instantly pops up saying "Quote request submitted successfully". This gives clear feedback to the user.

Error Prevention (Golden Rule 5 / Heuristic 5): The interactive input form validation checks the email format and missing fields before submission, stopping errors before they happen.

Flexibility and Efficiency of Use (Heuristic 7): Instead of opening external desktop email applications like the old legacy system, users can now create and send a price quote request directly inside the web page in a few clicks.

5. Conclusion & Deliverables

5.1 Interactive Figma Prototype Link:

Below is the working link to our unified high-fidelity prototype containing the interactive pages. You can interact with the user flows directly:

[figma Prototype Link\(click here\)](#)

5.2 Challenges & Learnings:

- **Challenges:**

Our biggest challenge was the knowledge of the user interface of the five members of the group, and the lack of understanding about fig ma in various places. At first, different members used different colors and different navigation links.

- **Learnings:**

We solved that problem by sharing each other's knowledge, repeatedly using notes and designing user interface in fig ma. This project also taught us how to use the Think-Aloud Protocol to capture actual user insights and turn them into UI updates.
